PRODUCT INTRODUCTION
ORCATORCH D520 is a palm-sized diving light with a mechanically rotary switch. The rotary switch offers high reliability underwater. Using the USA CREE XM-L2(U4) neutral white LED, its max output can reach 1000 lumens, meanwhile the 3000K LED color temperature copes with expected color rendition. Powered by one 1650 battery, its max runtime can reach 2 hours. Plus robust water pressure resistant construction, high portability and easy operation, D520 would be qualified for both recreational diving as a primary light and deep diving as a backup light.

PRODUCT FEATURES
- Cree XM-L2(U4) LED, max 1000 lumens output
- Uses 1x1650/2xCR123A/2x18650 battery
- Mechanically head rotary switch offers high reliability underwater
- Water pressure resistant construction, depth rated to 150 meters
- Reverse polarity protection, to protect from improper battery installation
- Over-discharge protection function
- Aircraft-grade high strength aluminum material
- Multi-cloak diamond grade hard anodized seawater-corrosion resistance finish
- Alloy aluminum reflector with professional optical analysis
- Two sides coated toughened glass with high water pressure resistant underwater deep water

TECHNICAL PARAMETERS
- ANS/NEMA FL1 Mode
- FL Output: 1000 Lumens, 2hrs
- Water Resistant: 2400m (On land)
- Intensity: 14300cd
- Height: 95mm
- Diameter: 165mm
- Waterproof: under water 150m
- Working voltage: 3~8.4V
- Dimension: 134.5mm(Long) x 24mm(Diameter) x 30mm(Head)
- Weight: 113g (excluding battery)
- Accessory: 1650 battery, charger, O-ring, lanyard

Note: Stated data has been measured according to the international flashlight test standards ANSI/NEMA FL1 using one OrcaTorch 1650 Li-ion battery (3.7V, 3400mAh) under laboratory conditions. The parameters are approximate and may vary between flashlight, batteries, and environments.

OPERATION INSTRUCTIONS
1. ON/OFF: Insert the battery and tighten the light head to turn on the flashlight, unscrew the light head to turn it off.
2. Please tighten the light head to turn on the light before you go underwater, and do not unscrew the light head until you have gone out of water to avoid leaking underwater.
3. The total runtime will be extended significantly if the light is used discontinuously.

BATTERY REPLACEMENT
1. As shown in the figure, insert the battery with the anode side (+) toward the light head.
2. Do not reverse battery to avoid damage to the flashlight and battery.
3. Please do not use battery with higher voltage than flashlight working voltage.
4. Please do not use battery with damaged surface or deformation to avoid short circuit, explosion, leakage, etc.

USAGE AND MAINTENANCE
- Please clean the surface of the light with fresh water and wipe it dry after use in case of the seawater corrosiveness.

PRODUCT WARRANTY
We will replace products afflicted with manufacturing defects within 30 days of purchase and repair a light free of charge within 12 months of purchase if problems develop under normal use. If repair is required after 12 months from the date of purchase, we will charge for parts. The total repair fee is dictated by the cost of the replaced materials.

Please register your OrcaTorch products through official website www.orcatorch.com to get extra 1 year warranty.

Warning: The flashlight is high intensity lighting device and capable of causing eye damage, please avoid shining the light directly into the eyes.

Do not drop or place the light on sand. In case iron sand stick or go into switch section or screw thread.
- Tighten all the connections of the light before going underwater.
- Please take out the batteries after each diving.
- Please don’t disassemble the sealed head, doing so may cause damage to the flashlight and will void the warranty.
- We recommend the use of high quality batteries. If the flashlight will not be used for a long time, remove the batteries to avoid damage from electrolyte leakage or short circuit.
- Please replace O-rings if they are damaged after prolonged use and regularly lubricate the O-rings so as to not seal the rubber. Doing so will keep the flashlight properly sealed against water.
- Please clean the contacts of your light from time to time, especially when the light flickers or doesn’t light up. There are probably several reasons for a flickering or not working light: Reason A: The batteries need to be replaced. Solution: Replace batteries [Please confirm correct installation of + and - terminals].
- Reason B: The threads, PCB board contact or other contacts are dirty. Solution: Clean the contact points with an alcohol soaked cotton swab. If the methods above don’t work, please contact the distributors and refer to the warranty policy.
